Walkthrough 8: the storyboard

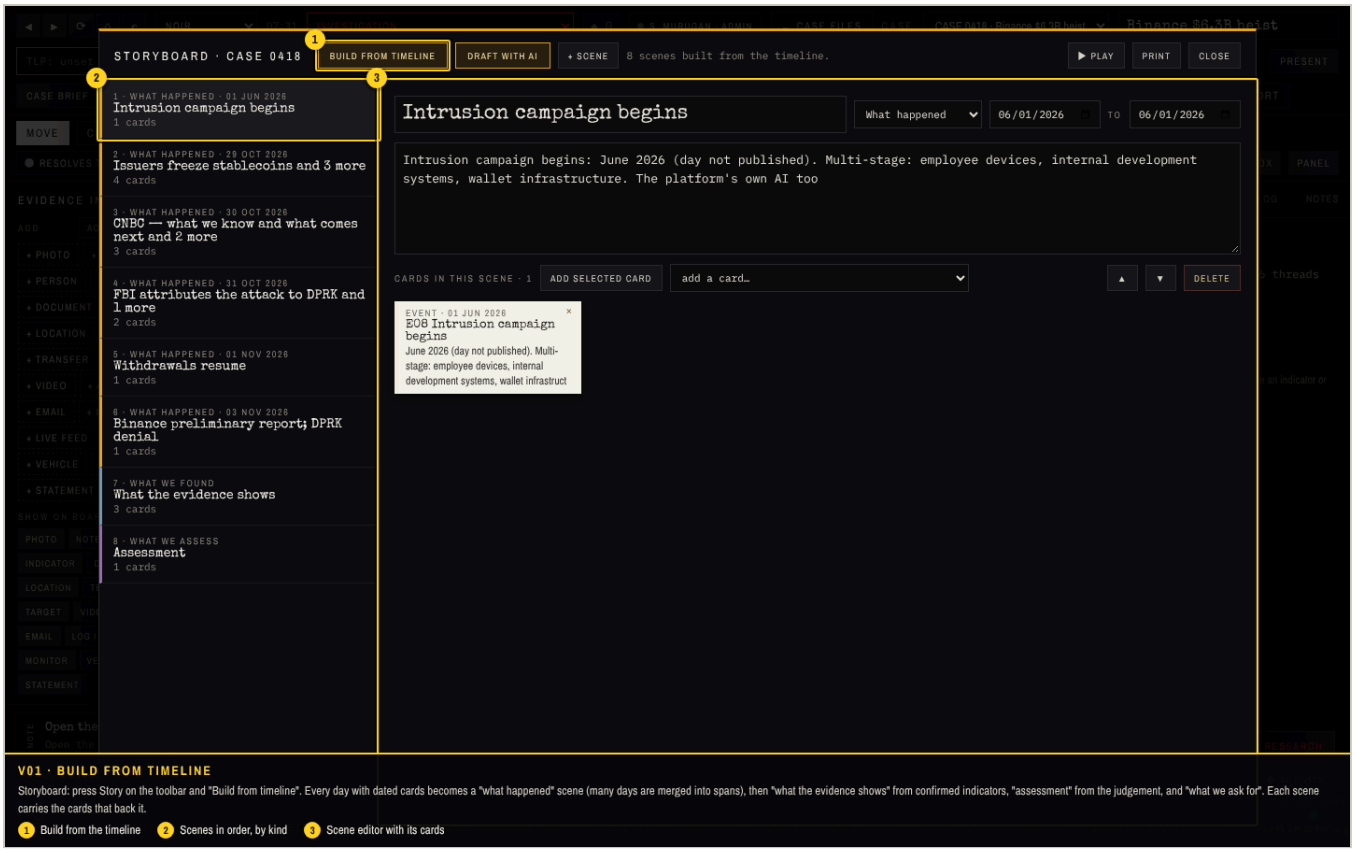

A board is for the analyst; a story is for everyone else. This round turns a case into scenes: what happened, in order and with dates; what we found; what we assess, with confidence; what we ask for. Scenes are built from the timeline in one click or drafted by the model, edited in place with the cards that back them, played slide by slide for a briefing, printed one scene per page, printed as a chapter of the case brief, and shown on the public page from the share link. Screenshots come from `tools/capture/v8.cjs` against a fresh server; the checks are listed at the end.

Feature	Where	What it does
Story panel	board toolbar → Story	Scenes with title, kind, date range, caption and the cards that back them. Add, reorder, delete; "Add selected card" pins the board's selection to a scene.
Build from timeline	Story panel	One scene per day of dated cards (merged into spans when there are many), then *What the evidence shows*, *Assessment* and *What we ask for* from the indicators, judgement and open tasks.
Draft with AI	Story panel	The model writes scenes with captions citing exhibits; without a key the rules engine builds the same structure. Appends to or replaces the scenes you have.
Play	Story panel	Full-screen playback, one scene at a time, arrow keys or buttons; Esc returns. Made for a briefing room.
Print	Story panel	One scene per page with the exhibits as tiles, for a hand-over or a leadership pack.
Brief chapter	Case brief	A *Story* section before the timeline, with each scene's kind, dates, caption and exhibits.
Public page	share link	The storyboard appears at the top of the shared page, scene by scene, with the exhibits it rests on.

How to use it

1. Open the case on the board and press **Story** (next to Kill chain).
2. **Build from timeline** or **Draft with AI** to get a first set of scenes; then edit titles and captions, change a scene's kind, and add or remove cards.
3. **Play** to present it; **Print** for a PDF; the case brief and any share link pick the story up automatically.

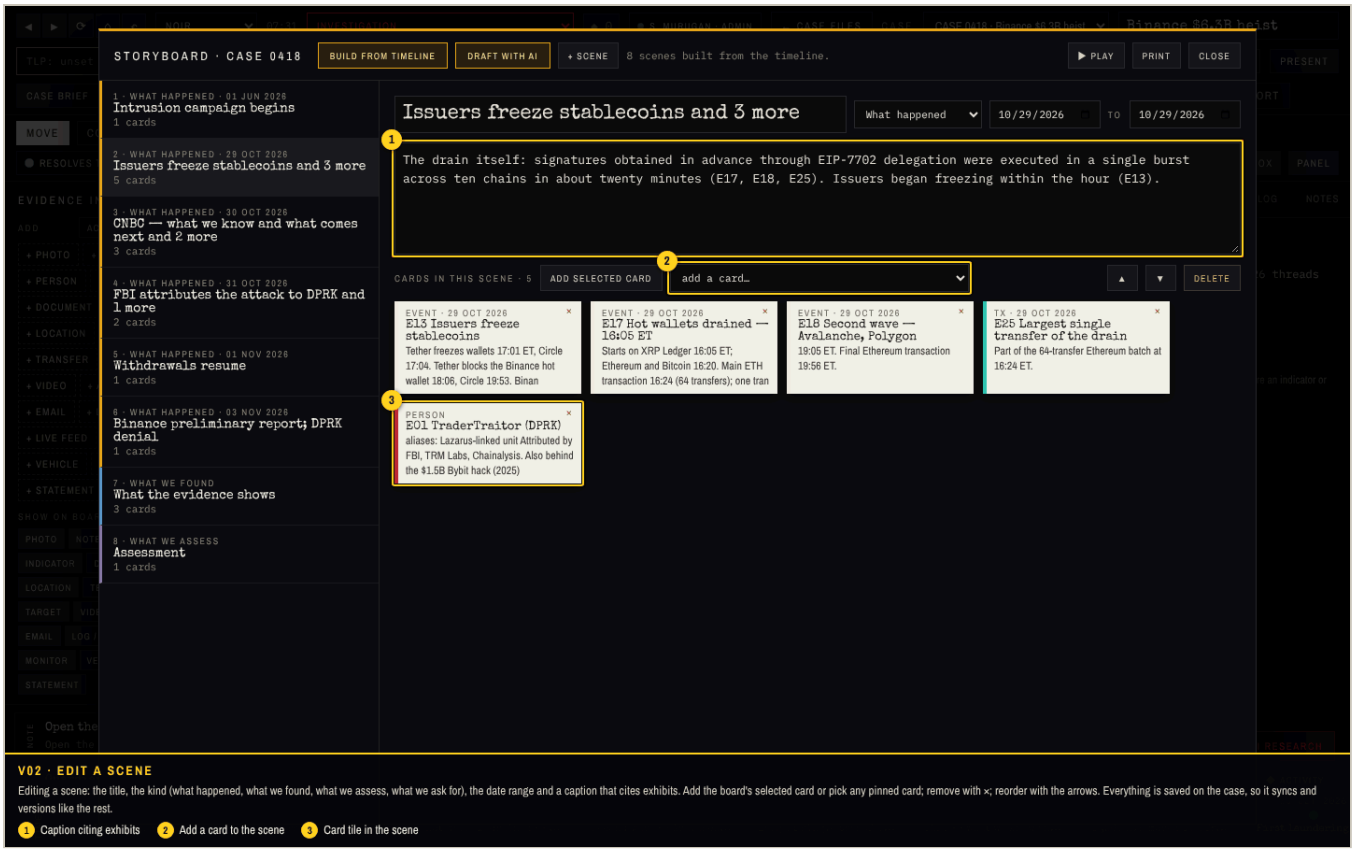

V01 · BUILD FROM TIMELINE

Storyboard: press Story on the toolbar and "Build from timeline". Every day with dated cards becomes a "what happened" scene (many days are merged into spans), then "what the evidence shows" from confirmed indicators, "assessment" from the judgement, and "what we ask for". Each scene carries the cards that back it.

1. Build from the timeline
2. Scenes in order, by kind
3. Scene editor with its cards

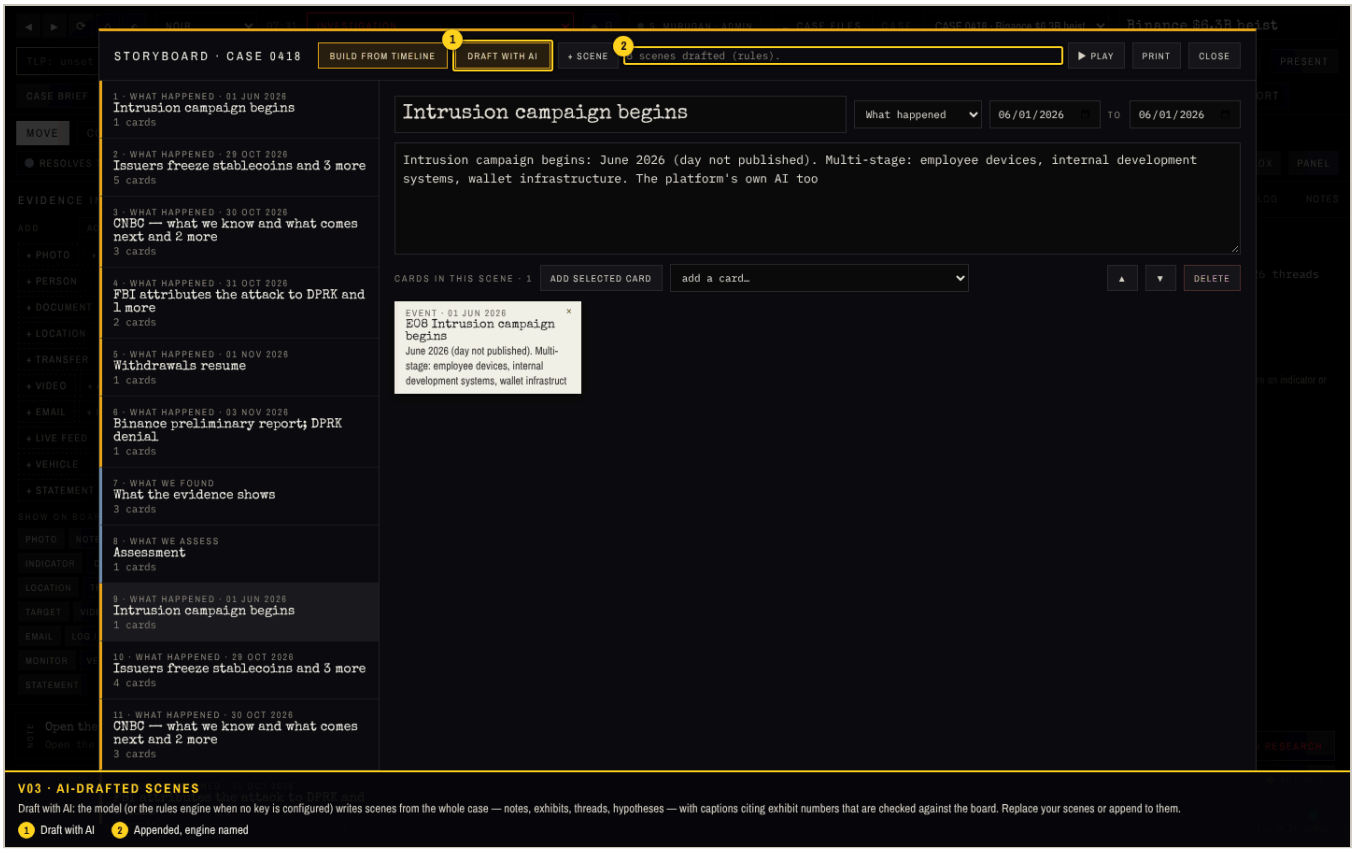

V02 · EDIT A SCENE

Editing a scene: the title, the kind (what happened, what we found, what we assess, what we ask for), the date range and a caption that cites exhibits. Add the board's selected card or pick any pinned card; remove with ×; reorder with the arrows. Everything is saved on the case, so it syncs and versions like the rest.

1. Caption citing exhibits
2. Add a card to the scene
3. Card tile in the scene

V03 · AI-DRAFTED SCENES

Draft with AI: the model (or the rules engine when no key is configured) writes scenes from the whole case — notes, exhibits, threads, hypotheses — with captions citing exhibit numbers that are checked against the board. Replace your scenes or append to them.

1. Draft with AI
2. Appended, engine named

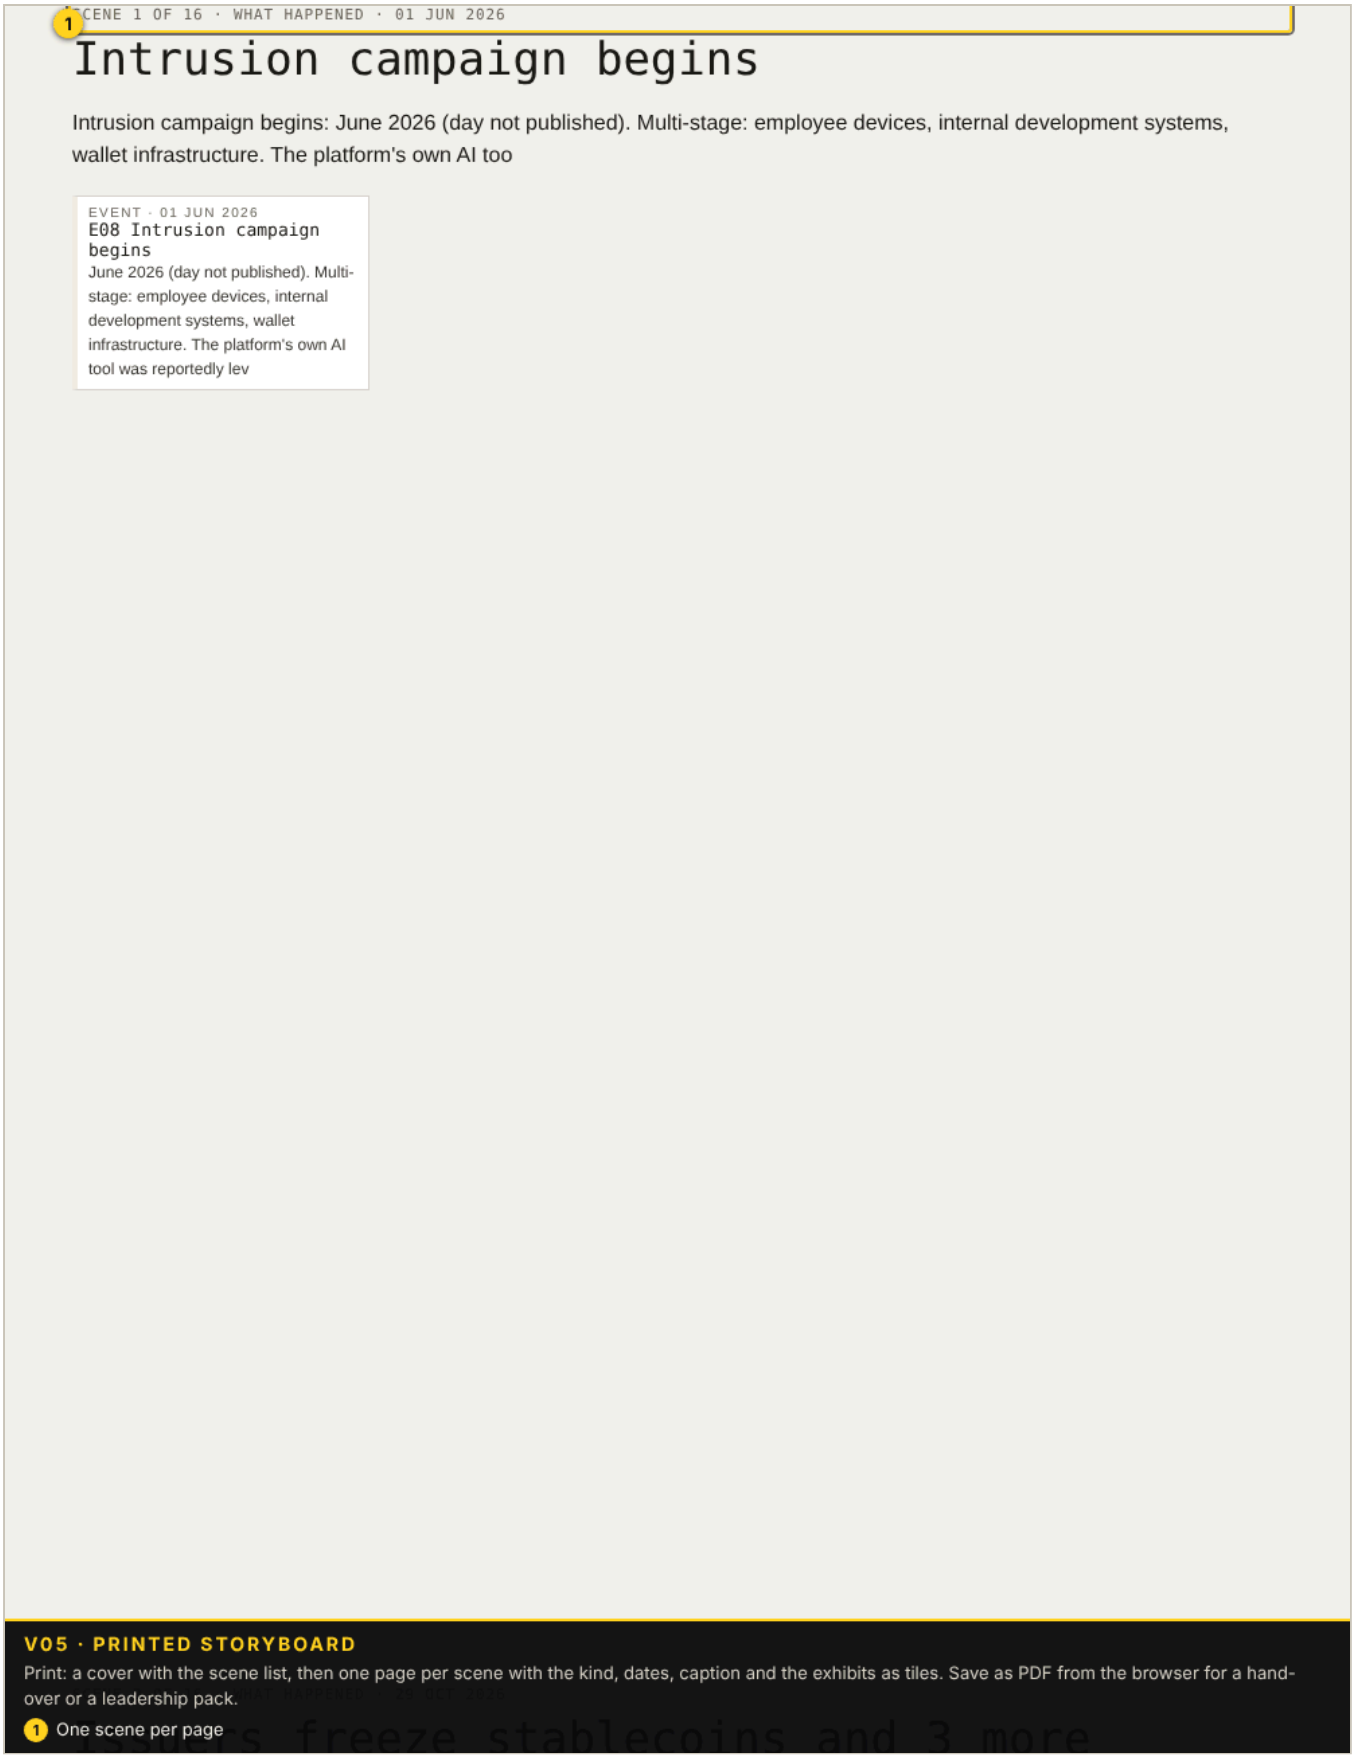

V04 · PLAY

Play: a full-screen view of one scene at a time — kind and dates, title, caption, the cards as tiles. Arrow keys or the buttons move between scenes; Esc returns to the editor. Made for the briefing room.

1. Scene counter and kind
2. Backing cards

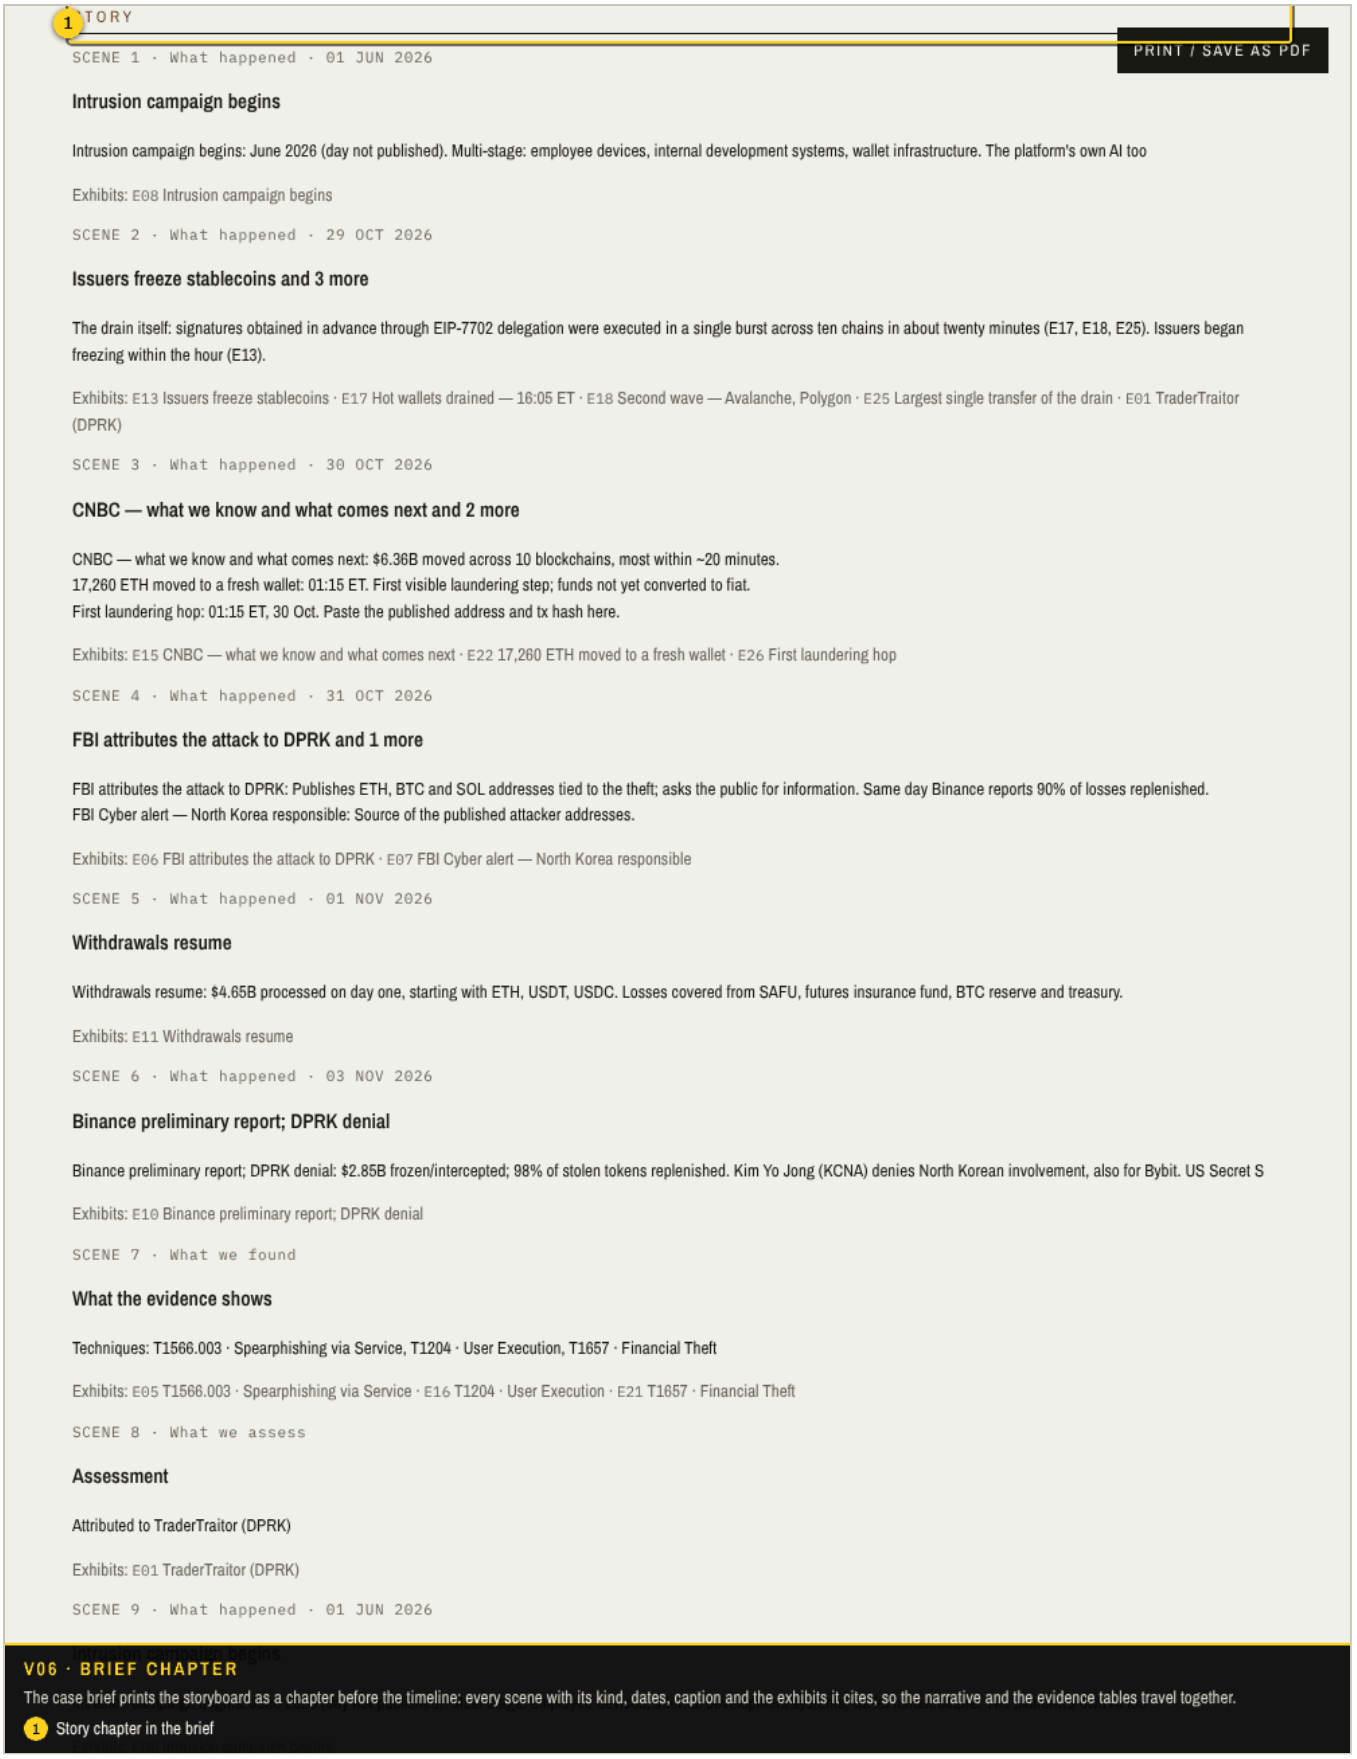

V05 · PRINTED STORYBOARD

Print: a cover with the scene list, then one page per scene with the kind, dates, caption and the exhibits as tiles. Save as PDF from the browser for a hand-over or a leadership pack.

1. One scene per page

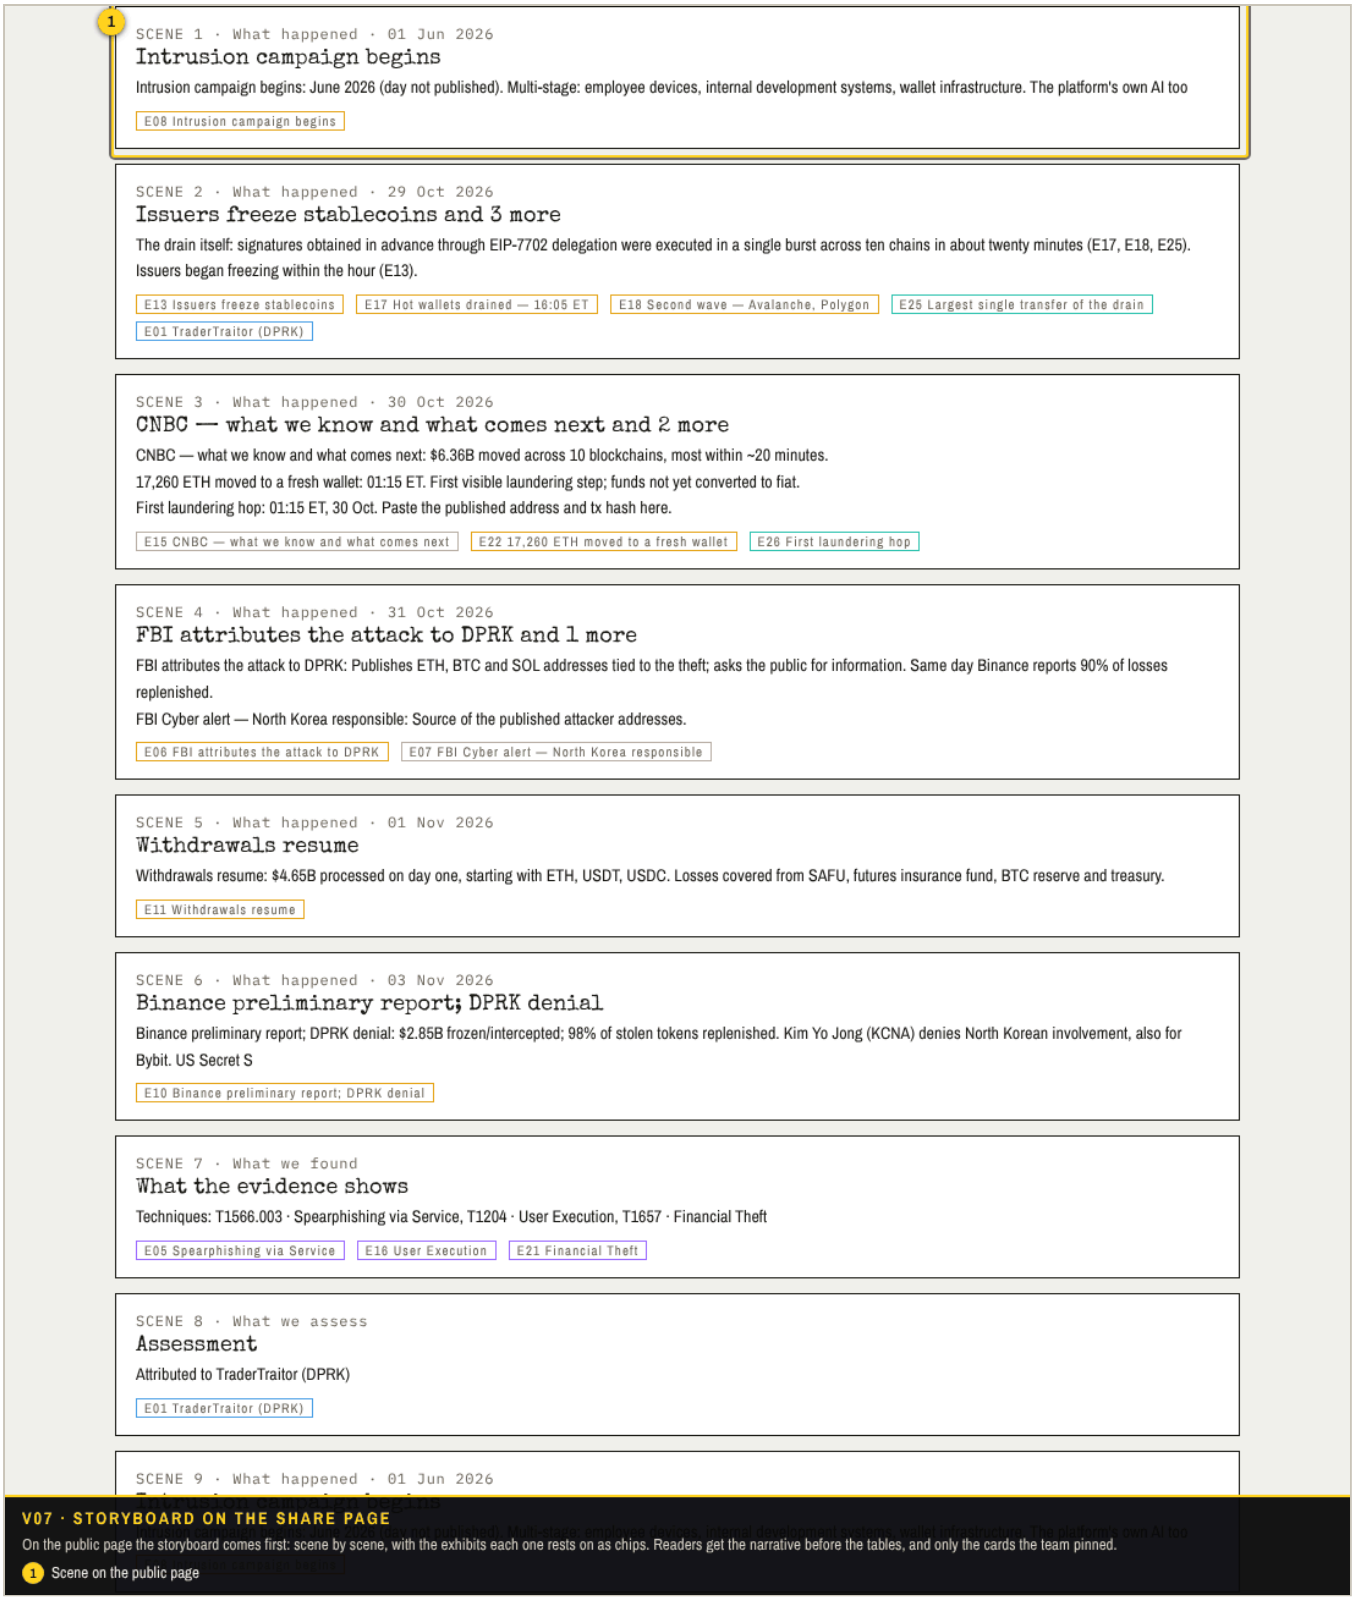

V06 · BRIEF CHAPTER

The case brief prints the storyboard as a chapter before the timeline: every scene with its kind, dates, caption and the exhibits it cites, so the narrative and the evidence tables travel together.

1. Story chapter in the brief

V07 · STORYBOARD ON THE SHARE PAGE

On the public page the storyboard comes first: scene by scene, with the exhibits each one rests on as chips. Readers get the narrative before the tables, and only the cards the team pinned.

1. Scene on the public page

Checks

10 of 10 passed in the run that produced these screenshots.

Result	Check	Detail
PASS	V01 setup: admin and the sample case on the board	CASE 0418 open
PASS	V02 build the story from the timeline: one scene per day, then evidence, assessment and asks	8 scenes: happened, happened, happened, happened, happened, happened, found, assess
PASS	V03 edit a scene: caption, kind and the cards it rests on	caption set, 5 cards in scene 2
PASS	V04 draft with AI appends scenes written from the whole case (rules engine without a key)	8 → 16 scenes
PASS	V05 play the story full screen, one scene at a time	advanced with →, closed with Esc
PASS	V06 print: one scene per page with its exhibits	17 pages for 16 scenes
PASS	V07 the case brief gains a Story chapter before the timeline	Story chapter present before Timeline
PASS	V08 the public share page shows the storyboard first	16 scenes on the public page
PASS	V09 the story survives a reload and is part of the case document	16 scenes on the server
PASS	no unexpected page errors
