Walkthrough 4: enrichment that runs itself

Indicators used to be looked up by hand, one at a time, in the OSINT workbench. This round makes the board do the routine work: every indicator is enriched when it is pinned, watchers re-check indicators on a schedule and raise the alarm when something changes, duplicates are found and merged in one click, and the technique and actor libraries can be as complete as MITRE's. Screenshots come from `tools/capture/v4.cjs` against a fresh server; the checks are listed at the end.

Feature	Where	What it does
Enrichment on pin	automatic; Activity drawer → Enrich	RDAP owner, ASN, country; DNS, registrar, domain age, certificate log; CVSS and CISA KEV; wallet balance; VirusTotal / MalwareBazaar when keyed. Written onto the card; 24 h server cache; `shared-infra` tag and warning for CDN, cloud and code-hosting ranges. "Enrich all pending" and "Refresh selected" for existing boards.
Watchers	Activity drawer → Watch	Per indicator: interval (1 h to 7 days), checks (DNS, certificate, blocklist, wallet, NVD), optional webhook. On change: event card in the case inbox, notification, webhook. "Run now" for an immediate check.
Duplicate finder	Activity drawer → Dupes	Same indicator value, technique id or title grouped; merge into one keeps the pinned card, re-points threads, unions tags, tasks, comments.
ATT&CK matrix	Activity drawer → Actors (admin)	Downloads the full MITRE Enterprise matrix once; every `T-id` typed into quick add then resolves to its name and tactic, and the kill-chain view lanes it.
Actor library	Activity drawer → Actors	Add or update actors, import STIX intrusion sets / threat actors or a MISP galaxy; merged into the board's Actor library (Drop in works for them).

Walkthrough

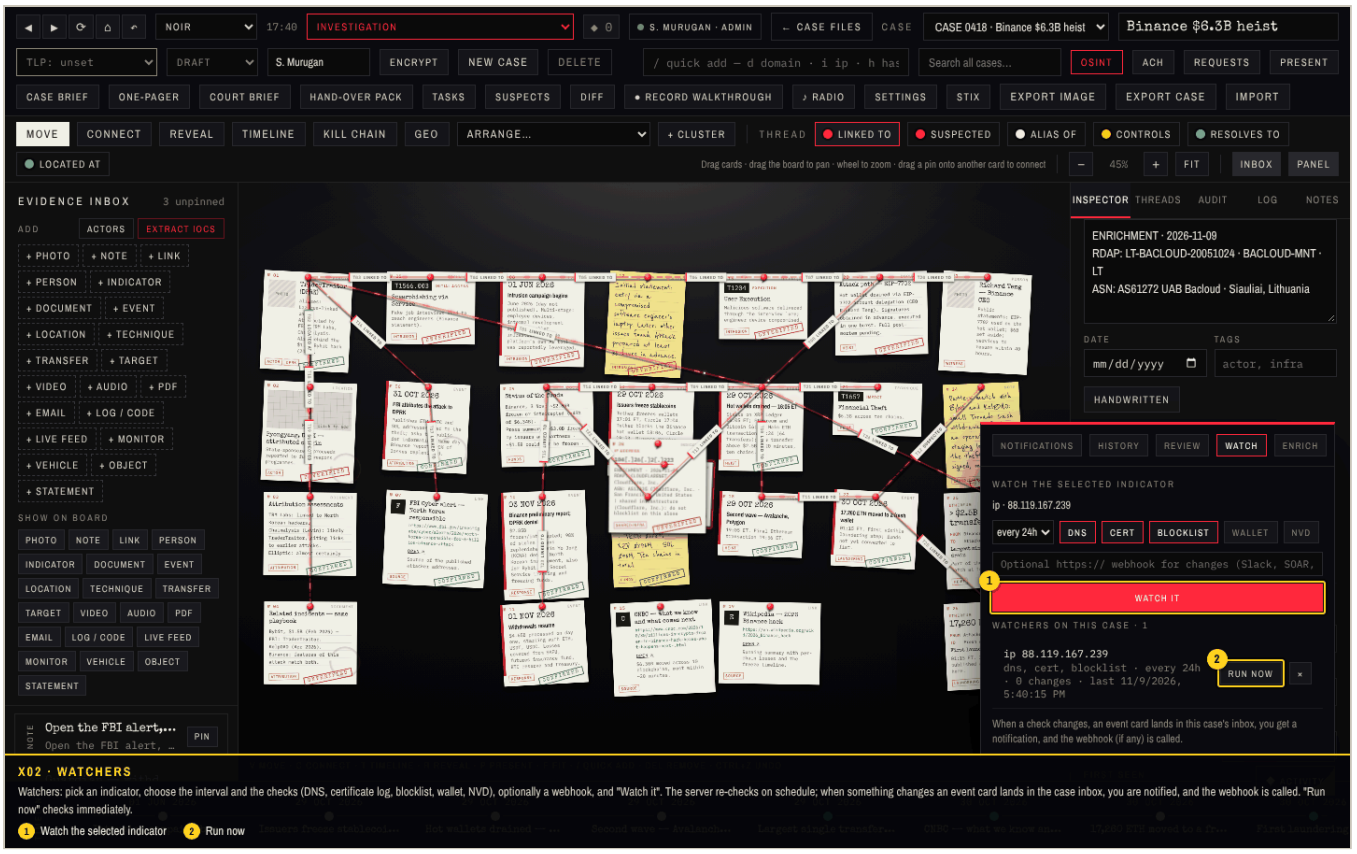

X01 · ENRICHMENT ON PIN

Enrichment on pin: the moment an indicator lands on the board the server looks it up once (RDAP owner, ASN, country; for domains DNS, registrar and age, certificate log; for CVEs CVSS and KEV; for wallets balance; VirusTotal and MalwareBazaar when keyed). The result is written into the card body and tags. A CDN or cloud address is tagged shared-infra with a warning, so it is not blocklisted on its own.

1. Shared-infrastructure warning written on the card
2. Enrichment block: RDAP, ASN, country, dates

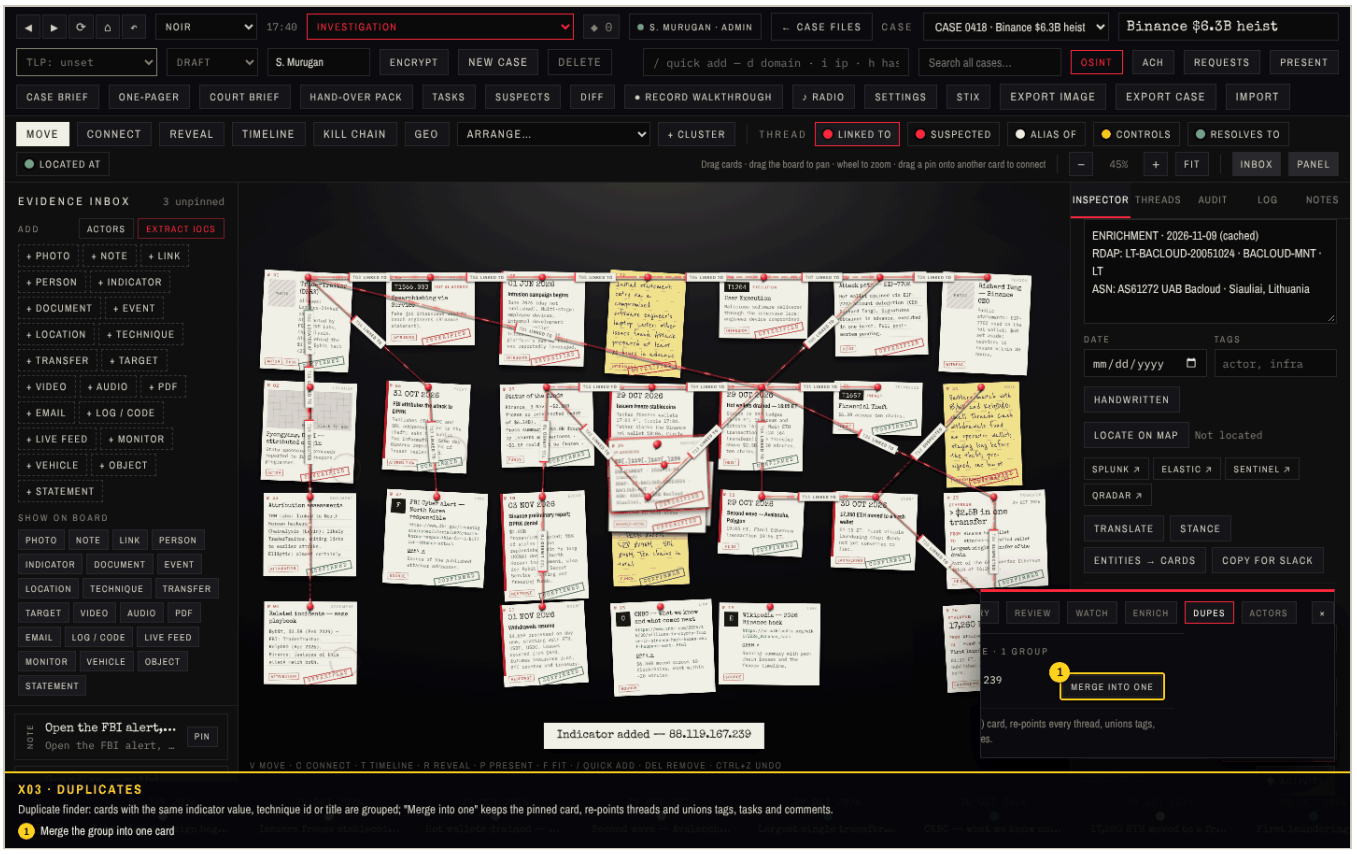

X02 · WATCHERS

Watchers: pick an indicator, choose the interval and the checks (DNS, certificate log, blocklist, wallet, NVD), optionally a webhook, and "Watch it". The server re-checks on schedule; when something changes an event card lands in the case inbox, you are notified, and the webhook is called. "Run now" checks immediately.

1. Watch the selected indicator
2. Run now

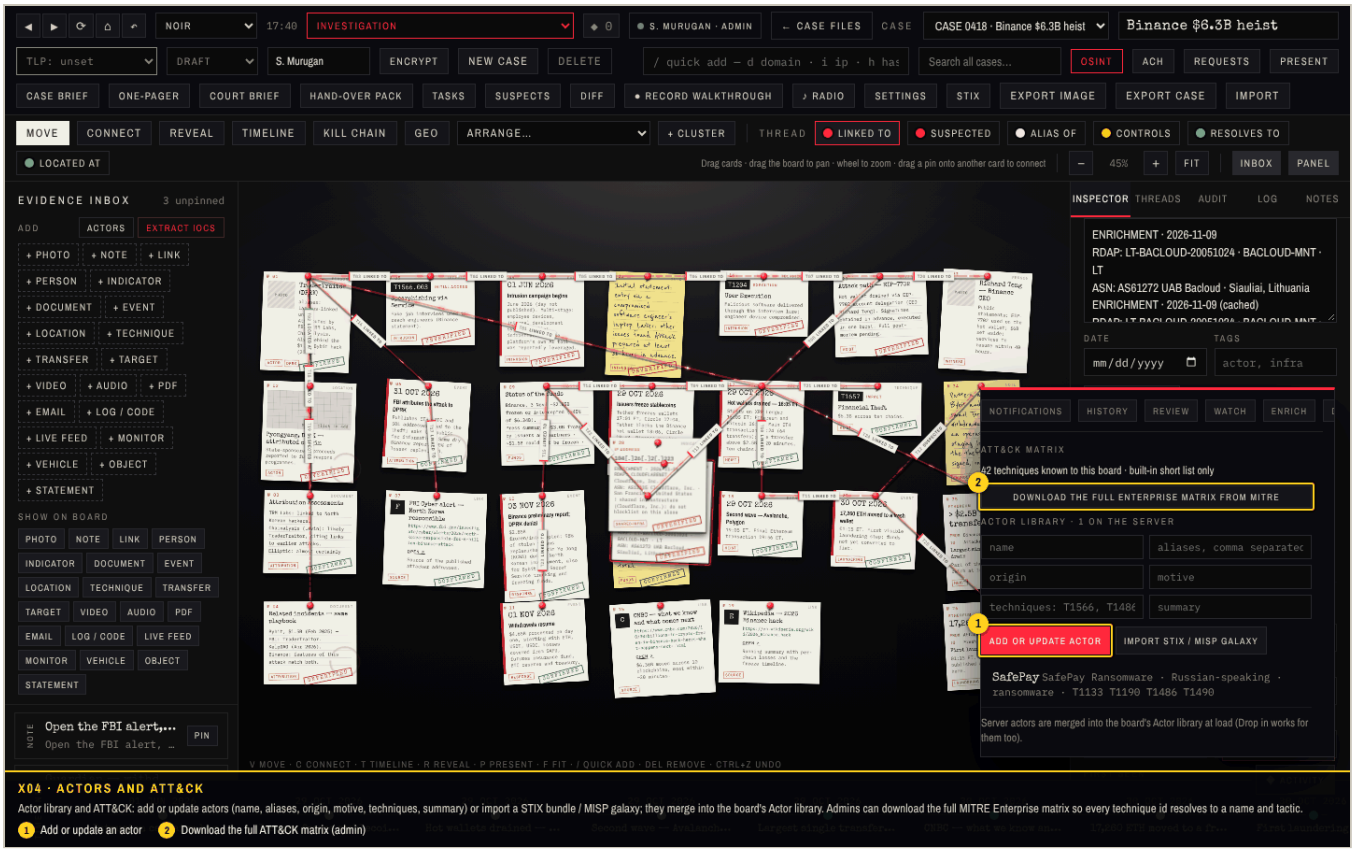

X03 · DUPLICATES

Duplicate finder: cards with the same indicator value, technique id or title are grouped; "Merge into one" keeps the pinned card, re-points threads and unions tags, tasks and comments.

1. Merge the group into one card

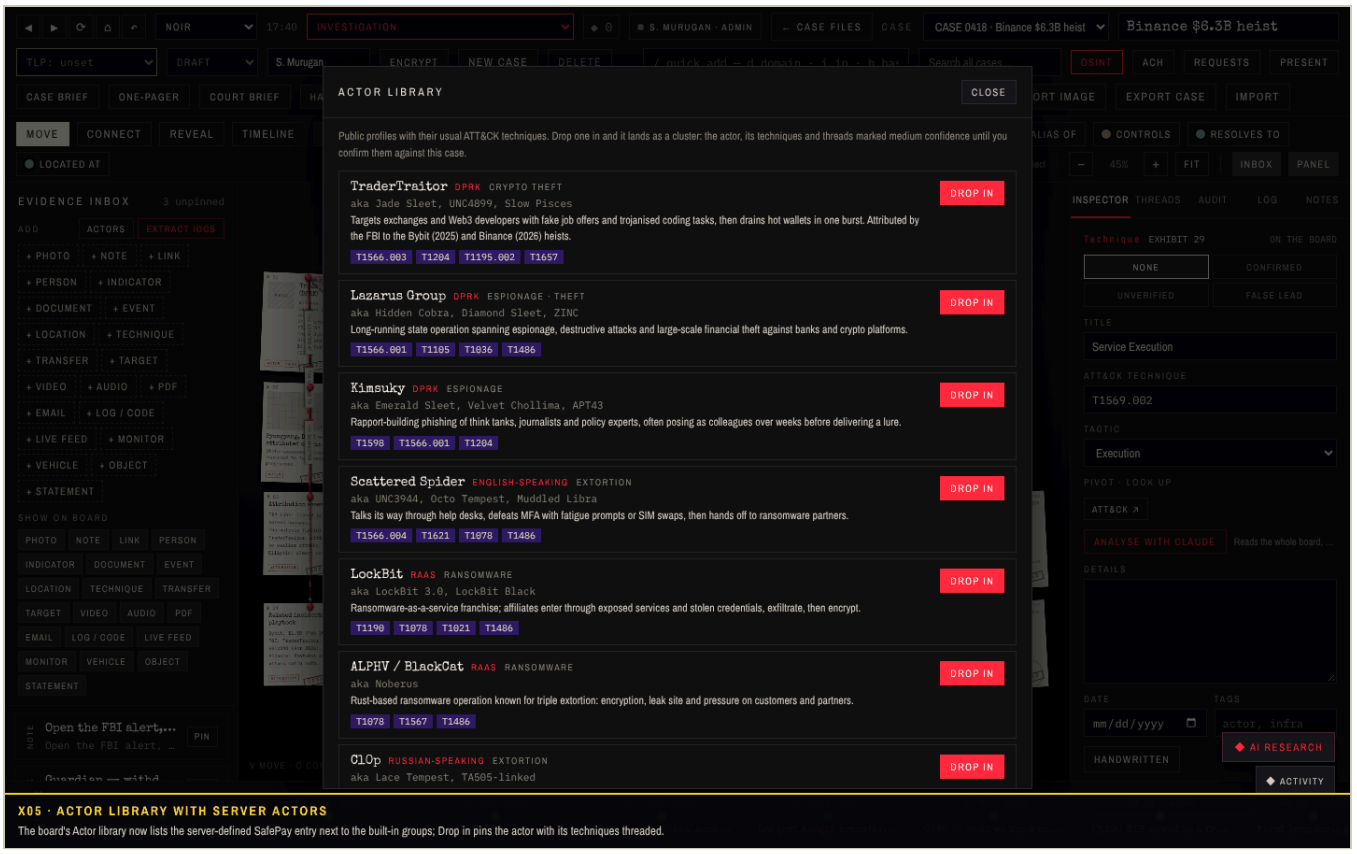

X04 · ACTORS AND ATT&CK

Actor library and ATT&CK: add or update actors (name, aliases, origin, motive, techniques, summary) or import a STIX bundle / MISP galaxy; they merge into the board's Actor library. Admins can download the full MITRE Enterprise matrix so every technique id resolves to a name and tactic.

1. Add or update an actor
2. Download the full ATT&CK matrix (admin)

X05 · ACTOR LIBRARY WITH SERVER ACTORS

The board's Actor library now lists the server-defined SafePay entry next to the built-in groups; Drop in pins the actor with its techniques threaded.

Checks

8 of 8 passed in the run that produced these screenshots.

Result	Check	Detail
PASS	X01 setup and open the board	ATT&CK techniques known at start: 42
PASS	X02 enrichment on pin: a quick-added IP gets RDAP/ASN written onto the card; a Cloudflare IP is flagged shared	ASN AS61272 UAB Bacloud · Cloudflare tagged shared-infra
PASS	X03 watcher: watch the C2 IP, run it now, see it in the list	ip 88.119.167.239 every 24h (dns, cert, blocklist)
PASS	X04 duplicate finder merges two cards for the same indicator	merged to one card
PASS	X05 actor library: add an actor on the server; it is available to the board's Drop in after reload	1 actor(s) on the server
PASS	X06 full ATT&CK matrix download from MITRE (needs internet; skipped gracefully if blocked)	706 techniques (ATT&CK); T1569.002 → Service Execution
PASS	X07 drop in a server-defined actor from the Actor library	
PASS	no unexpected page errors
